20. ABSTRACT (Continue on reverse side if necessary and identify by block number) A program has been written for reading a GEODATA tape and copying all or portions of the navigational, bathymetric, and magnetics data by listing, by punching cards, and/or by writing a new tape. The program can eliminate data not taken on certain dates or data which do not fall in a certain area of latitude and longitude. The program thus enables the scientist to exchange data in any convenient form while eliminating any classified information. The program was written in Fortran IV for use on the CDC 3800; however the program can be converted to run on other systems with little difficulty.

A PROGRAM FOR COPYING A GEODATA DATA TAPE

1.0 INTRODUCTION

1.1 Title

Program for copying a GEODATA data tape.

1.2 Identification Name

GEOREAD.

1.3 Classification Code

None.

1.4 NRL Research Computation Center Identification Number

None.

1.5 Entry Points

GEOREAD.

1.6 Programming Language

Language: 3600/3800 Fortran.

Routine Type: Program.

Operating System: Drum Scope 2.1.

1.7

1.7 Computer and Configuration

CDC 3800.

1.8 Contribution or Programmer

Marilyn L. Blodgett, Code 4223MB Research Computation Center, Office of Director of Research, written for Environmental Sciences Section, Acoustics Division.

1.9 Contributing Organization

1.10 Program Availability

If supplied with a magnetic tape, a copy of this program will be made available by the Environmental Sciences Section, Acoustics Division.

1.11 Verification

This program has been used and tested by the Environmental Sciences Section, Acoustics Division.

1.12 Date

September 1974.

2.0 PURPOSE

2.1 Description of the Routine

The program reads a data tape written by program GEODATA and copies all or portions of the data by listing, by punching cards and/or by writing a new tape. The input data tape, as well as the new tape, is written in the format recommended by the National Research Council of the National Academy of Sciences with one slight modification for the navigational data. There is one logical record (of 80 characters) for each data point. The different types of data (navigation, bathymetry, and magnetics) are separated by an end-of-file mark with a double end-of-file mark at the end of all the data. The cards will be punched in the same format as the tape.

The program has one input card which specifies which types of data should be copied and how they should be copied. If only certain portions of the data are to be copied, the card specifies the dates and times or the latitude and longitude values defining the desired area.

2.2 Problem Background

A program was needed to copy GEODATA tapes in order to exchange the data collected by oceanographic and geophysical cruises with other facilities. The use of the format recommended by the National Research Council of the National Academy of Sciences simplifies the reporting of such data.

3.0 USAGE

3.1 Calling Sequence or Operational Procedure

Not applicable.

NRL REPORT 7862

3.2 Arguments, Parameters, and/or Initial Conditions

Not Applicable.

3.3 Space Required (Decimal and Octal)

3.3.1 Unique Storage

2113 octal (587 decimal) locations exclusive of system library functions.

3.3.2 Common Blocks

None.

3.3.3 Temporary Storage.

None.

3.4 Messages and Instructions to the Operation

None.

3.5 Error Returns, Messages, and Codes

None.

3.6 Informative Messages to the User

None.

3.7 Input

The program has one input card which specifies which types of data (navigation, bathymetry, magnetics) are to be copied, how they are to be copied (list, punch, or write new tape), and the specific portions of data to be copied. Appendix B is a complete description of the input setup and shows samples of the format for the three types of data on the GEODATA data tape.

3.8 Output

The program will write a new tape on logical unit 12 in the same format as the GEODATA input tape (see Appendix A). It will also punch cards in the same format — one card for each logical record. There is also an option for listing all the required records on the standard printer (logical unit 61). Appendix C is a sample output listing.

3.9 Formats

Appendix B, which shows the program deck structure, describes the formats.

3.10 External Routines and Symbols

SKIPFILE,
XMODF.

3.11 Timing

The time required depends on the number of records to be read and copied.

3.12 Accuracy

Not applicable.

3.13 Caution to User

None.

3.14 Program Deck Structure

See Appendix B.

4.0 METHOD OR ALGORITHM

Not applicable.

5.0 FLOW CHART AND/OR SOURCE LANGUAGE LISTING

Flow chart and listing are given in Appendix D.

6.0 COMPARISON

There are no other known programs available for comparison.

7.0 TEST METHOD AND RESULTS

A sample of the listing for all three types of data are given in Appendix C. Samples

			and ending time are defined in Columns 15-30. 2 = all the data are to be copied.

If Column 14 = 1:

15-22	07172130 This is the time the program starts copying data. Columns 15-16 = month, Columns 17-18 = day, Columns 19-20 = hour, Columns 21-22 = minute.
23-30	08152215 This is the time the program stops copying the data. 23-24 = month, 25-26 = day, 27-28 = hour, 29-30 = minute.

In the above example (Columns 15-30) the data between July 17 at 21 hours and 30 minutes and August 15 at 22 hours and 15 minutes will be copied.

If Column 14 = 0:

31-40	40.50 This is the southernmost latitude of the area to be copied.
41-50	50.00 The northernmost latitude.
51-60	-28.00 The westernmost longitude.
61-70	-14.00 The easternmost longitude. Columns 31-70, the positions are in degrees and hundredths of a degree (not degrees and minutes). Southern latitudes and western longitudes are preceded by a minus sign.

10 End-of-File

One EOF card is needed to terminate the run.
